DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d),
 which papers have been placed of record in the file.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over US patent number 6,420,203 (Okawa et al) in view of US patent number 6,324,067 (Nishiyama).

Regarding claims 1, 2, 4, 5, 8-10, Okawa et al discloses a condenser microphone comprising: a semiconductor device comprising: a conductive pattern (column 1 lines 12-20); a semiconductor element (11) placed on the conductive pattern; a fixed electrode layer (12) electrically connected to the semiconductor element; and a vibration film (16) provided to be opposed to the fixed electrode layer to provide another electrode of the condenser

Application/Control Number: 10/782,609

Art Unit: 2614

Okawa et al does not disclose a sealing resin for integrally sealing the conductive pattern and the semiconductor element.

However, the sealing resin is well known in the art. For instance,

Nishiyama discloses a resin for sealing components in a semiconductor

device (column 1 lines38-48).

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to use this well known sealing resin. Regarding claim 3, Okawa et al further discloses wherein the fixed electrode layer is electrically connected via a penetrated hole (116). Regarding claim 6, 7 and 11, Okawa et al also shows wherein the semiconductor device, the fixed electrode layer, and the vibration film are stored in a case member and the semiconductor device is fixed via a substrate to the inner wall of the case member (see figures 3, 5).

Conclusion

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tuan D. Nguyen whose telephone number is (571) 272-8163. The examiner can normally be reached on M-F 6:30-3:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Curt Kuntz can be reached on (571) 272-7499.

The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
